

## CUT-UP

# WING CUTTER

## DESCRIPTION

Used to cut anatomically, at the joint the wings of the chicken. The machine is mounted on the cut-up line and it is manually adjustable in height and width. The cut is achieved thanks to two rotating blades. Each blade is controlled by an electric motor and protected with a proper guard. To get the best yield the weight difference in the flock cannot exceed 500gr. The machine is made of stainless steel.
